

Pavilion Theatre will provide the maximum possible fresh air ventilation into the auditorium and rooms served by the main air handling unit while operating within the capacity of this system to maintain at least a minimum level of comfort for the public. As always fresh air ventilation will be in operation before, during and after each performance and air extraction from all toilet facilities will be maintained for this period and for a longer period post show. Air handling filters have been upgraded from a filtration standard of 3p-65 (ePM2.5 50%), to 3p-95 (ePM1 85%) which is the highest spec filter available for our system. Where natural ventilation is available this will also be utilised.
